- What is the main idea of your project? What topics will you explore and what will you generate?
  Some sort of game. Computer vision. Player gets shot out of cannon and has to dodge birds and other obstacles

- What is your minimum viable product? What is a stretch goal?
  MVP: Player dodges points in the sky.
  Stretch goal: more graphics
- What are your learning goals for this project?
  Learn how to use computer vision. Make something resume worthy
- What libraries are you planning to use? (if you don't know enough yet, please outline how you will decide this question during the beginning phase of the project).
  OpenCV, pygame
- What do you plan to accomplish by the mid-project check-in? (See below for some generic goals; edit to suit your particular project)
  Have classes for our project Installed libraries. Plan for implementation
- What do you view as the biggest risks to you being successful on this project?
  Time availability
